

Google Documents - Google Docs.

Google Documents is a set of open source (free) software provided by Google. It offers access to word processing, spreadsheet, and presentation software (similar to PowerPoint). Using this software you are able to work on documents anywhere you have access to the Internet. It eliminates the need to save your work in a network folder or on a flash drive. Beyond that, it allows you to invite others to work with you on a document, edit a document, or read a document you created. Only people you invite will have access to your documents. Items created in the word processing program can be downloaded to Microsoft Word if needed.

My Google Documents Login:

Name _____

Email _____

Password: (hint*) _____

Provide a hint that will jog your memory for the password you created.

DO NOT put the actual password on the line as doing so could jeopardize your security. If you used a password you often use make your hint "usual". If you needed to double your normal password write "usual doubled".
